(54) Title: METHOD FOR DETERMINING MOBILE TERMINAL PERFORMANCE IN A RUNNING WIRELESS NETWORK

(57) Abstract: A technique for determining the performance of a mobile terminal within a communications network is disclosed. The technique receives messages associated with one or more user transactions and messages associated with mobile terminal type information. The data within the received user transaction messages is then correlated with data associated with the mobile terminal type information messages. Various performance indicators may then be derived by mobile terminal type information from the correlated data. The invention may be practiced in context with the benchmarking of mobile terminal types on an application level.
